

- IMPORTANT - Site Instructions

It is important that each participant (teacher, student, bus driver) recognize the LIGO Livingston is a working observatory and collects science data continuously. The collection of data can be compromised by heavy ground vibrations including that from vehicles large and small.

You must follow the instructions:

- 1. Approach the guard gate slowly. The larger the vehicle the sooner the slow down should begin.*
- 2. Push the black intercom button. The LIGO control room operator will greet you. Announce your school name and purpose of visit (field trip). Wait for instructions.*
- 3. The gate will open to the facility; vehicle speed is 10 mph or slower on the entire site. It is important not to speed up or slow down quickly when coming to a stop. Do not run over curbs.*
- 4. Follow the sign to the Science Education Center and park in the lower parking lot.*
- 5. All vehicles/drivers/buses are to remain on site for the duration of the LIGO visit.*
- 6. You will be greeted at the SEC entrance by LIGO SEC staff.*

*Thank you from all the SEC and LIGO staff
for keeping the vibrations to a minimum.*
